We generate enough electricity to power 4,800 homes. That’s equal to a town the size of Kidlington.

The facility replaces fossil fuel derived fertiliser from 2,500 acres of land. Today fossil fuel fertilisers used in Britain account for 5% of the nation’s total greenhouse gas emissions.

The facility processes 50,000 tonnes of food waste a year – that’s enough to fill 20 Olympic swimming pools.

The facility was constructed from 52% recycled aggregates.

The facility has the net Green House Gas Benefit of taking 71,000 cars off the road annually.

The facility produces 4,500,000 m³ of methane each year – that’s enough methane to fill 16 Albert Halls.

The facility reduces fossil fuel derived fertiliser from 2,500 acres of land. Today fossil fuel fertilisers used in Britain account for 5% of the nation’s total greenhouse gas emissions.
